### MEI's EZMarker UV TBA

Designed to apply visible logos to all types of plastic lenses, MEI's EZMarker UV TBA utilizes electronically controlled axes to ensure accurate positioning and correct focal distance of the lens. A solid-state laser system engraves perpendicular to the lens to create a resolution higher than 600 dpi. The EZMarker UV TBA features automated loading and unloading and can be easily integrated into existing equipment lines or combined with MEI's stackers and destackers. For more information, contact MEI at 847.357.0323 or [Info@MEISystem.com](mailto:Info@MEISystem.com).
