

SurfXM Stand

The professional eye to guarantee the perfect lens.

SURFXM | *Stand*

SurfXM Stand is the new compact, semi-automatic device developed by MEI to ensure quick and effective quality control of the lens surface. This new solution avoids the need for a skilled operator to control every lens, round or edged, at the end of the production processes (after surfacing, coating, or edging), ensuring your customers receive perfect lenses with the quality they deserve.

SurfXM Stand features:

LENS IMAGES ACQUISITION
with very high resolution

CAPACITY TO EMPHASIZE DEFECTS
with algorithms developed by the MEI R&D

EVALUATION OF THE LENS DEFECTS
by comparing them with a database

ABILITY TO CHECK ROUND OR EDGED LENSES

The operator loads and unloads a lens while the system is analyzing the previous one, ensuring the cycle time is fully optimized.

As an option, SurfXM Stand includes a function that offers the operator the opportunity to check the analyzed lens directly through a beam of LED light. This new device is the next step in the MEI **'Total Quality Control'** concept, aimed to ensure the best lens quality at every step of the production process.
